

Hiace

In-Vehicle Equipment for Toyota

The Toyota Hiace is designed to be driver friendly and when you install Bott In-Vehicle Equipment the package is a real winner.

o p t i m

Bott are a specialist manufacturer of In-Vehicle Equipment, which helps provide a safe and secure working area in the back of your new Toyota Hiace.

The packages illustrated are designed as a starting point; drawers, shelving modules and some accessories are included.

Packages are for use by service engineers or tradesmen and provide plenty of capacity for tools and equipment.

For companies requiring facilities to carry specialist equipment a Bott sales engineer will be able to offer a customised package to cater for your exact requirements.

Installation of your equipment can be arranged at a convenient location, depending upon amount and type of equipment ordered.

To arrange for a quotation or further details of Bott equipment contact your local dealer at the address overleaf.

Top Tray - can be divided into sections using standard shelf dividers. An extra high divider kit is available for larger items or box files.

Drop front shelf - allows easier access to shelves where large items are stored.

Low front shelf - a simple shelf system that can be used in conjunction with modular plastic bin kits for storage of small components. The shelves may also be divided using the standard low front shelf divider kit.

Wheel arch drop front - restrains items stored either side of the wheel arch utilising every last space in the vehicle.

is e d

Locking bar - provides extra security for drawers and service cases.

Drawers - available in different sizes with a range of divider options. The drawers open smoothly even when fully loaded.

Trigger locks - drawers will not roll open even when left unlocked.

Service cases - available in a range of sizes with optional component bins.
