

## In-Vehicle Equipment for the Citroën

b e r l i n g o

## The *Citroën Berlingo* provides an ideal platform for these new installations from Bott

This Bott **drawer installation** is combined with a shelf module ► to provide concealed storage for valuable tools and equipment; and shelf space for storing components or materials. The lockable drawers are 1mtr long, providing access to the full length of the load area, and can be divided into sections using a standard divider kit.

An added bonus for this installation is the lockable cupboard behind the seats, which provides secure storage accessible from the cabin.

The shelf module includes - a top tray and two low front shelves with optional bin kits to suit.

◀ The Bott **sliding side panel** is fitted to the near side with a four shelf module on the outside.

This system will be most useful to service engineers or tradesmen including electricians, plumbers and decorators. The sliding panel comes complete with perfo kit and 4 sizes of tilt bins for storage of small parts and components.

In situations where access is required to the full length of the ► vehicle and Health & Safety issues are an important factor then a Bott **sliding floor** is the solution!

The Bott sliding floor comes with a durable, non-slip floor and six lashing eyes for securing the load. A locking mechanism ensures the floor remains in position whilst on the move and a series of nylon rollers provide a smooth and easy extension of the floor.

Each installation should have a standard Bott floor and bulkhead. The bulkhead is available with a safety glass window if required.

For further information on these standard products from the Bott Limited range please contact your nearest Citroën dealer using the details below.

As part of our ongoing policy of product improvement and development Bott Limited reserve the right to alter colours and specification to those illustrated in this leaflet.

Any tools, accessories or components illustrated, are not included in the price.
