

# Bott Container Installations

Secure purpose-built workshops and storage systems

Bott have been designing and manufacturing workshop and storage systems for industrial use for over 20 years. Our equipment is used by many major manufacturers in their production and maintenance

departments and has provided many years of reliable service.

Some 10 years ago Bott Limited launched a range of equipment designed specifically for installation into light commercial vehicles. Bott installs equipment into all shapes and sizes of vehicles, designed to fulfil a variety of service and maintenance tasks for business and consumers alike.

The Bott container draws on the many years of experience in providing mobile and static installations to meet the needs of many industries.

Container workshops can be transported to different locations to provide the same level of facilities on each site. In situations where health and safety plays a major role in determining the workplace design and function, the Bott Container will without doubt provide a suitable environment.

Bott Container Installations represent an ideal opportunity to invest in a secure, purpose-built facility. It may be tailored to specific requirements, industries or environments. The package offered has been designed to provide a great degree of self-sufficiency to the user.

Bott equipment is designed and manufactured in the UK with extensive stocks available to fulfil customer requirements. Bott can offer a comprehensive installation service for standard products and are also able to source and install any specialist ancillary equipment.
